

### Metodologia di analisi

I dati esaminati nel presente documento sono stati forniti dal Centro Studi ENPAM.

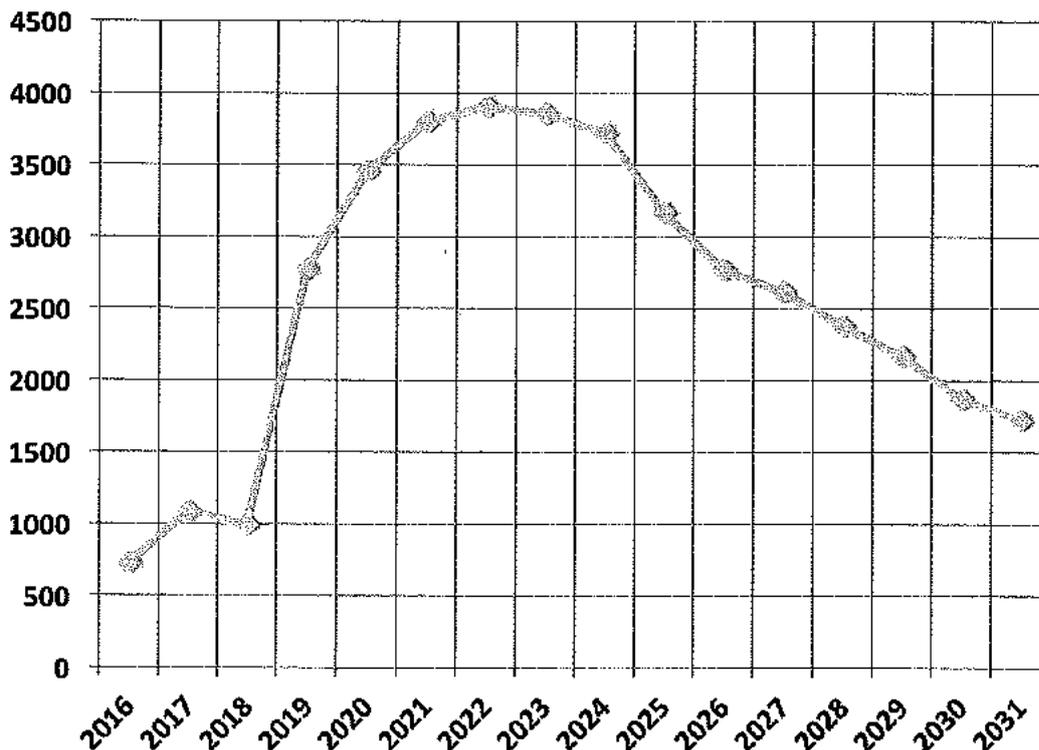

Le elaborazioni sono state effettuate sulla base dei dati ENPAM riferiti all'anno 2015 ed estratti a giugno 2016.

E' stata presa in considerazione la popolazione di Medici di Medicina Generale che ha versato da 9 a 12 mesi di contribuzione riferita all'anno 2015 (sono stati esclusi i deceduti e i pensionati).

I medici che svolgono doppia attività sono stati inseriti nella categoria dove risultano accreditati per l'anno 2015 contributi di importo maggiore.

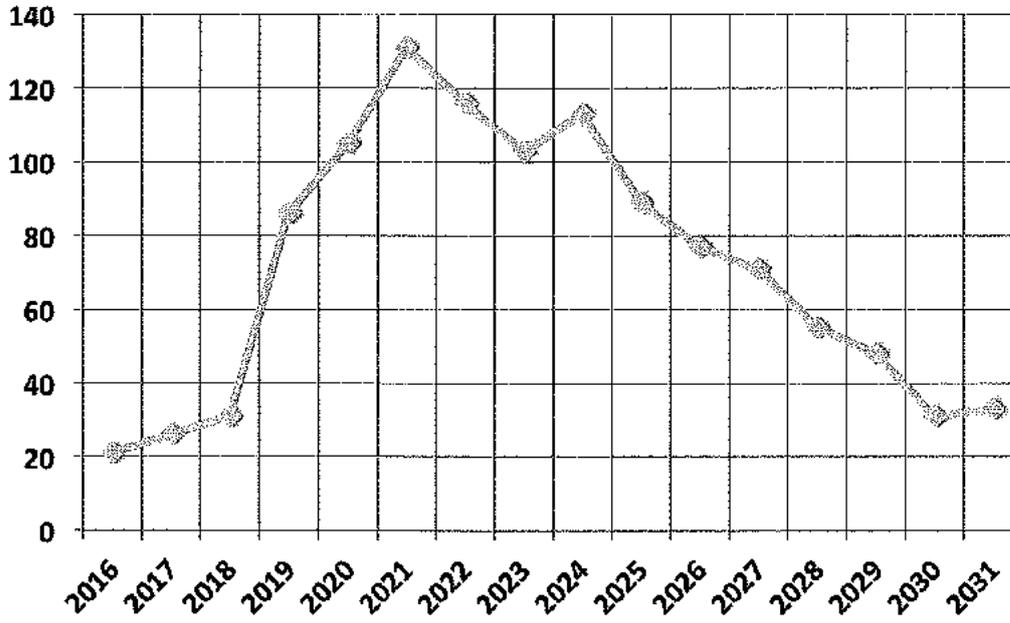

Oltre ai Medici compresi nei grafici seguenti sono altresì ancora in attività 2479 Medici di Assistenza Primaria che hanno maturato il requisito ma che ancora non sono andati in pensione e che andranno in quiescenza entro 3-4 anni.
